

# SoftTouch Switch Interface Setup

SoftTouch software is programmed to operate with a switch or switches emulating the '1' and '2' keys on your keyboard.

## Directions for Don Johnston Switch Interface Pro 5.0:

1. Click the push button on top until the red LED light is lit.
2. Plug your 'first' switch into the the 2nd jack from the left. The '1' should be directly above the jack when looking at the red row.
3. If you are using a two switch setup, plug the second switch into the 3rd jack from the left. The '2' should be directly above the jack when looking at the red row.
4. You are now ready to use the switch with the SoftTouch Software program.

## Note:

Other switch interfaces will work, as long as they can emulate the 1 and 2 key on the keyboard. Some alternative mouse devices only allow you to use the switch as a mouse click. Please call us if you have any questions.
